ILLINOIS INSTITUTE OF TECHNOLOGY

## Outline

- 0) Course Info
- 1) Introduction
- 2) Data Preparation and Cleaning
- 3) Schema matching and mapping
- 4) Virtual Data Integration
- 5) Data Exchange**
- 6) Data Warehousing
- 7) Big Data Analytics
- 8) Data Provenance

1

ILLINOIS INSTITUTE OF TECHNOLOGY

## 5. Data Exchange

- **Virtual Data Integration**
  - Never materialize instances for the global schema
  - Data of global schema only “visible” through queries
- **Data Exchange**
  - Materialize instance of global instance
    - We call it the “target schema”
  - Based on information from an instance of the local schema
    - We call this the “source schema”

2

ILLINOIS INSTITUTE OF TECHNOLOGY

## 5. Data Exchange

- **Data Exchange Problem Statement**
- **Input:**
  - Given a **source** and a **target schema**
  - + instance of the source schema
  - + set of schema mappings (here st-tgds)
- **Output:**
  - Instance of the target schema that fulfills constraints

3

ILLINOIS INSTITUTE OF TECHNOLOGY

## 5. Data Exchange

**Example: Types of Matching**

**Person**

Name  
Address

**Person**

Name  
Address  
Office-phone  
Office-address  
Home-phone

| Name  | Address |
|-------|---------|
| Peter | 1       |
| Alice | 3       |
| Bob   | 3       |

| Id | City     | Office-contact |
|----|----------|----------------|
| 1  | Chicago  | (312) 123 4343 |
| 2  | Chicago  | (312) 555 7777 |
| 3  | New York | (465) 123 1234 |

$\forall x, y, z, a : Person(x, y) \wedge Address(y, z, a) \rightarrow \exists b, c : Person(x, z, a, b, c)$

4

ILLINOIS INSTITUTE OF TECHNOLOGY

## 5. Data Exchange

**Example: Types of Matching**

**Person**

Name  
Address

**Person**

Name  
Address  
Office-phone  
Office-address  
Home-phone

| Name  | Address |
|-------|---------|
| Peter | 1       |
| Alice | 2       |
| Bob   | 3       |

| Id | City     | Office-contact |
|----|----------|----------------|
| 1  | Chicago  | (312) 123 4343 |
| 2  | Chicago  | (312) 555 7777 |
| 3  | New York | (465) 123 1234 |

| Name  | Address  | Office-phone   | Office-address | Home-phone |
|-------|----------|----------------|----------------|------------|
| Peter | Chicago  | (312) 123 4343 |                |            |
| Alice | Chicago  | (312) 555 7777 |                |            |
| Bob   | New York | (465) 123 1234 |                |            |

5

### 5.1 Data Exchange Setting

ILLINOIS INSTITUTE OF TECHNOLOGY

**Definition: Data Exchange Setting**

Data Exchange setting is a tuple  $(S, T, I, \Sigma)$

- Schema  $S$
- Schema  $T$
- Instance  $I$  of  $S$
- Mappings  $\Sigma$  from  $S$  to  $T$

6 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Definition: Data Exchange Solution**

Given data exchange setting is a tuple  $(S, T, I, \Sigma)$

- Find instance  $J$  of  $T$  so that  $(I, J)$  fulfills mappings  $\Sigma$
- $J$  uses values from a **universe  $U$**  and set of **labeled nulls  $N$**

7 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Solutions**

| Name  | Address | Id | City     | Office-contact |
|-------|---------|----|----------|----------------|
| Peter | 1       | 1  | Chicago  | (312) 123 4343 |
| Alice | 2       | 2  | Chicago  | (312) 555 7777 |
| Bob   | 3       | 3  | New York | (465) 123 1234 |

$\forall x, y, z, a : Person(x, y) \wedge Address(y, z, a) \rightarrow \exists b, c : Person(x, z, a, b, c)$

Can we come up with a solution?

8 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Solutions**

| Name  | Address  | Office-phone   | Office-address | Home-phone |
|-------|----------|----------------|----------------|------------|
| Peter | Chicago  | (312) 123 4343 | NULL           | NULL       |
| Alice | Chicago  | (312) 555 7777 | NULL           | NULL       |
| Bob   | New York | (465) 123 1234 | NULL           | NULL       |

$\forall x, y, z, a : Person(x, y) \wedge Address(y, z, a) \rightarrow \exists b, c : Person(x, z, a, b, c)$

9 CSS20 - 5) Data Exchange

### 5.1 Number of Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

- **How many solutions exists?**
  - Depends on how whether we use existentially quantified variables in the mappings?
    - i.e., do we have attributes for which we have to invent values?
  - What attribute values do we allow?
    - Surely values from the source instance (active domain)
    - NULL?
      - Need multiple NULL values as placeholders for missing values that have to be the same
  - Note that this is the open-world assumption
    - there are infinitely many solutions (if domains infinite)

10 CSS20 - 5) Data Exchange

### 5.1 Number of Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

- **Target instance domain**
  - Consider a **universe  $U$** 
    - Source instance can only use values from  $U$
  - Consider an infinite **set  $N$  of labeled nulls**
    - Target instance can use these as placeholders for missing values

11 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Multiple Solutions**

| Name  | Address  | Office-phone   | Office-address | Home-phone |
|-------|----------|----------------|----------------|------------|
| Peter | Chicago  | (312) 123 4343 | X              | Y          |
| Alice | Chicago  | (312) 555 7777 | A              | A          |
| Bob   | New York | (465) 123 1234 | C              | D          |

Home-phone

| Name      | Address    | Office-phone   | Office-address | Home-phone |
|-----------|------------|----------------|----------------|------------|
| Peter     | Chicago    | (312) 123 4343 | X              | Y          |
| Alice     | Chicago    | (312) 555 7777 | A              | A          |
| Bob       | New York   | (465) 123 1234 | C              | D          |
| Heinzbert | Pferdegert | 111-222-3798   | E              |            |

| Name  | Address  | Office-phone   | Office-address | Home-phone   |
|-------|----------|----------------|----------------|--------------|
| Peter | Chicago  | (312) 123 4343 | Hometown       | 111-322-3454 |
| Alice | Chicago  | (312) 555 7777 | A              | A            |
| Bob   | New York | (465) 123 1234 | Other town     | D            |

12 CSS20 - 5) Data Exchange

### 5.1 Certain answers (... again)

ILLINOIS INSTITUTE OF TECHNOLOGY

- **Have multiple solutions**
  - Define certain answers for queries as before
  - Every tuple  $t$  so that  $t$  is in the result of query  $Q$  over any valid solution  $J$
- **What's new?**
  - Want to materialize an instance so that computing certain answers over this instance is easy
    - Not immediately clear that this actually possible

13 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Solution generality**

| Name  | Address  | Office-phone   | Office-address | Home-phone |
|-------|----------|----------------|----------------|------------|
| Peter | Chicago  | (312) 123 4343 | X              | Y          |
| Alice | Chicago  | (312) 555 7777 | A              | A          |
| Bob   | New York | (465) 123 1234 | C              | D          |

How general is solution (in terms of certain answers)?

Consider query  
 $Q(n) :- P(n, a, op, oa, hp), oa = Hometown$

| Name  | Address  | Office-phone   | Office-address | Home-phone   |
|-------|----------|----------------|----------------|--------------|
| Peter | Chicago  | (312) 123 4343 | Hometown       | 111-322-3454 |
| Alice | Chicago  | (312) 555 7777 | A              | A            |
| Bob   | New York | (465) 123 1234 | Other town     | D            |

14 CSS20 - 5) Data Exchange

### 5.1 Universal solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

- **Universal solution**
  - Want a solution that is as general as possible
  - We call such most general solutions universal solutions
  - How do we know whether it is most general
    - We can map the tuples in this solution to any other less general solution by replacing unspecified values (labelled nulls) with actual data values
- **Query answering with universal solutions**
  - For UCQs: run query over universal instance
  - Remove tuples with labelled nulls
  - Result are the certain answers!

15 CSS20 - 5) Data Exchange

### 5.1 Universal Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Definition: Homomorphism**

A homomorphism  $h$  from instance  $J$  to instance  $J'$  maps the constants and nulls of  $J$  to the constants and nulls of  $J'$  and fulfills the following conditions:

- Constants are mapped onto themselves:  $h(c) = c$
- Every tuple  $R(a_1, \dots, a_n)$  in  $J$  is mapped to a tuple in  $J'$ :  
 $R(a_1, \dots, a_n)$  in  $J \rightarrow R(h(a_1), \dots, h(a_n))$  in  $J'$

**Definition: Universal solution**

Given data exchange setting  $(S, T, I, \Sigma)$ . An instance  $J$  of  $T$  is called an universal solution for a source instance  $I$  if it is a solution and for every other solution  $J'$  hold that

- There exists a homomorphism from  $J$  to  $J'$

16 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Solution generality**

| Name  | Address  | Office-phone   | Office-address | Home-phone |
|-------|----------|----------------|----------------|------------|
| Peter | Chicago  | (312) 123 4343 | X              | Y          |
| Alice | Chicago  | (312) 555 7777 | A              | A          |
| Bob   | New York | (465) 123 1234 | C              | D          |

How general is solution (in terms of certain answers)?

Consider query  
 $Q(n) :- P(n, a, op, oa, hp), oa = Hometown$

17 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Solution generality**

| Name  | Address  | Office-phone   | Office-address | Home-phone |
|-------|----------|----------------|----------------|------------|
| Peter | Chicago  | (312) 123-4343 | X              | Y          |
| Alice | Chicago  | (312) 555-7777 | A              | A          |
| Bob   | New York | (465) 123-1234 | C              | D          |

Above is universal solution

How to map to below non-universal solution?  
 Replace generic labelled Nulls with values:  
 X -> Hometown, Y -> 111-322-3454, C -> other town,

| Name  | Address  | Office-phone   | Office-address | Home-phone   |
|-------|----------|----------------|----------------|--------------|
| Peter | Chicago  | (312) 123-4343 | Hometown       | 111-322-3454 |
| Alice | Chicago  | (312) 555-7777 | A              | A            |
| Bob   | New York | (465) 123-1234 | Other town     | D            |

18 CSS20 - 5) Data Exchange

### 5.2 Computing Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

- Note**
  - Schema mappings (st-tgds) are tuple-generating dependencies
  - What other tgd's do we know
    - Foreign keys
  - How did we solve violations to FKs?
    - **The chase!**
  - Chase produces universal solution!

19 CSS20 - 5) Data Exchange

### 5.2 Computing Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

- Can we use a database system to compute solutions?**
  - Yes, systems such as Cljo generate queries that compute universal solutions!
    - SQL
    - Java
    - XSLT (for XML does)

20 CSS20 - 5) Data Exchange

### 5.2 Computing Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

- Generating Executable Transformations**
  - How to preserve semantics of labeled nulls
    - $n = n'$  is true if we have the same labeled null only
    - $n = n'$  if one is a constant and the other one is a labeled null

21 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

- Skolem functions for labeled nulls**
  - For each existential variable in a tgd we create a new skolem function
  - What should be the arguments of the function?
    - Naive: all universally quantified variables
    - Better: only relevant ones

22 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

23 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$

Introduce skolem function **sk1** and **sk2** for **f** and **g**.

What arguments to choose for **sk1** and **sk2**?

E.g., **f** should be fixed for a certain address and should not depend on the person.

24 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

- **Clio Schema Graph Algorithm**
- **Nodes**
  - Create a graph with one node for every target attribute and one node for every target relation
  - Also add nodes for source attribute if they are copied to the target according to the mapping
- **Edges**
  - Edges between a relation and its attributes
  - Edges between target attributes that use the same variable
  - Edges between source attributes and target attributes if they use the same variable

25 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

- **Clio Schema Graph Algorithm**
- **Annotations**
  - Annotate each target attribute connected to a source attribute with that source attribute
  - Propagate annotations according to the following rules
    - Propagate annotations from attributes to relations
    - Propagate annotations from relations to attributes
      - Only if attribute uses existentially quantified variable
    - Propagate annotations between target attributes connected by equality edges

26 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$

27 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

1) Initialize with source attribute names

$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$

28 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

2) Propagate to parent and back to children

$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$

29 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

2) Propagate to parent and back to children

$$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$$

30 CSS20 - 5) Data Exchange

### 5.1 Data Exchange Solutions

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

3) Propagate along equality edges (here address=id) ... Compute fixpoint

$$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$$

31 CSS20 - 5) Data Exchange

### 5.2 Skolem Functions

ILLINOIS INSTITUTE OF TECHNOLOGY

- Clio Schema Graph Algorithm
- Skolem functions
  - Derive skolem function arguments from the schema graph annotations of an element

**Example: Skolem Functions**

$$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$$

For variable f (id, address) we assign sk1(a,b,c)  
 For variable g(age) we assign sk2(a,b,c)

32 CSS20 - 5) Data Exchange

### 5.2 Executable Transformations

ILLINOIS INSTITUTE OF TECHNOLOGY

- SQL Code Generation Example
  - For each tgd mentioning a target relation R we generate a query fragment
  - All query fragments for R are “unioned” together
  - A query fragment is
    - A FROM and WHERE clause that is a direct translation of the LHS of a tgd into SQL
    - A SELECT clause corresponding to the R atom in the RHS using attributes from the FROM clause can the skolem functions we have determined in the previous step

33 CSS20 - 5) Data Exchange

### 5.2 Executable Transformations

ILLINOIS INSTITUTE OF TECHNOLOGY

**Example: Skolem Functions**

$$\forall a, b, c, d, e : Person(a, b, c, d, e) \rightarrow \exists f, g Person(a, f, g) \wedge Address(f, b, c)$$

For Person atom in RHS:  
 SELECT name,  
       'SK1' || name || address || office-phone AS address,  
       'SK2' || name || address || office-phone AS age  
 FROM Person

For Address atom in RHS:  
 SELECT 'SK1' || name || address || office-phone AS address,  
       address AS city,  
       office-phone AS office-contact  
 FROM Person

34 CSS20 - 5) Data Exchange

### 5.3 Recap Data Exchange Steps

ILLINOIS INSTITUTE OF TECHNOLOGY

- Schema Matching
- Generate Schema Mappings
  - Use constraints
- Generate Executable Transformations
  - SQL, XSLT, XQuery
  - Skolems for missing value
- Run Transformations over source instance to generate target instance
  - Universal solution

35 CSS20 - 5) Data Exchange

### 5.3 Comparison with virtual integration

- Pay cost upfront instead of at query time
- Making decisions early vs. at query time
  - When generating a solution
  - Caution: bad decisions stick!
- **Universal solutions** allow efficient computation of certain types of queries using, e.g., SQL

36
