

Instructions for connecting to the projector from the iMac (Windows XP)

Step 1: Connect the VGA cable (using the mini-displayport attachment) to the back of the iMac — there's only one slot it fits in. You should hear audible feedback (if the volume is high enough).

Step 2: Click on the NVIDIA settings icon in the system tray.

Step 3: Mouse over the “nView Display Settings” menu item.

Step 4: Choose the display option — “Clone” will mirror the display on the iMac to the projector (necessarily reducing the resolution).
